

It's A Bug's Life!

Children's Questions

What is the most common insect in England?
Can an animal be both a predator and a prey?
What is the most poisonous mini-beast?
What are food chains?
What are observational drawings?
What is a campaign?

WOW Day

We will go on a nature walk to Willsbridge Mill to observe some of the local wildlife. We will take a picnic and complete some fun activities.

English

We will be writing a variety of genres including a newspaper article and a film review, as well as persuasive writing in the form of posters/adverts to campaign to preserve our wildlife.

Science

We will continue identifying and naming a variety of living things, plants and animals.

Additionally, we will construct simple series circuits, trying different components, such as bulbs, buzzers and motors including switches.

PE

We will be developing the skills needed to play a game of cricket. This will also involve children improving their team building skills.

RE

We will be exploring the philosophy of life being like a journey and experiences that support this.

RSE

We will be learning about the differences between males and females and thinking about how we change as we grow.

Art

We will continue to use water colours to create our own painting inspired by water and the famous artist Monet.

Mathematics

The children will be revisiting the maths they have covered so far this year.

French

We will be learning vocabulary related to our Science topic. We will then be learning the story of the hungry caterpillar and writing our own version.
